Amtd. Dated: 18 December 2006

Reply to Notice of Non-Compliant Amendment

Amendments to the Claims

Please amend and cancel claims as indicated below. This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (previously presented) A flexible seat for attachment to a three-wheeled collapsible jogging stroller having opposing side frame members, said seat comprising:
means coacting with said side frame members for enabling attachment of said seat to said opposing side members in free suspension therefrom;
said seat having a seating portion and a subtending leg rest portion below said seating portion; and
said seat includes transversely extending free floating substantially rigid stiffening means attached to said seat between said seating portion and said leg rest portion for providing transverse support to said seat.
2. (previously presented) The seat of claim 1 wherein said seat stiffening means is unattached to the frame of said stroller and defines the juncture of said seating portion and said leg rest portion.
3. (previously presented) The seat of claim 2 wherein said seat is of unitary one piece flexible fabric and said stiffening means collapses along with the fabric of said seat thereby allowing unobstructed collapsing of said stroller.
4. (previously presented) The seat of claim 3 wherein said seat includes attachment means for receiving said stiffening means at the underside of said seat.
5. (previously presented) The seat of claim 4 wherein said stiffening means is a bar member enclosed in the fabric of said seat to provide transverse seating support at the juncture of said

seating portion and said leg rest portion to prevent inward and downward collapsing of said seat when said seat is occupied.

6. (previously presented) A seat for attachment to a collapsible stroller having a frame with opposing side members , said seat comprising:

means coacting with said side members for enabling attachment of said seat to said frame to substantially span the distance between said opposing side members in free suspension therefrom;

said seat is of a flexible fabric material and includes a seating portion and a leg rest portion;

generally rigid stiffening means attached to said fabric and extending transversely thereof for defining the juncture of said seating portion and said leg rest portion and to provide seating support at said juncture; and

said stiffening means collapses along with said seat thereby to not obstruct collapse of said stroller.

7. (previously presented) The seat of claim 6 wherein said stiffening means is mated with the fabric of said seat to thereby provide transverse stability to said seat at the juncture of said seating portion and said leg rest portion.

8. (previously presented) The seat of claim 7 wherein said seat includes means for receiving said stiffening means at the underside of said seat at the junction of said seating portion and said leg rest portion approximately beneath the knees of the occupant.

9. (previously presented) The seat of claim 7 wherein said seat is of unitary one piece flexible material and said seating portion is generally contoured to the anatomy of the occupant.

10. (previously presented) A flexible for attachment to a collapsible stroller having opposing frame members, said seat comprising:

means for free floating suspension of said seat between said frame members;

said seat is of a flexible fabric material and includes a seating portion merging with a depending lower leg rest portion;

transversely extending generally rigid support means attached to said fabric at the juncture of said seating portion and said leg rest portion for providing transverse support to said seat; and

whereby with collapsing of said stroller said support means is compatibly collapsed with said fabric to thereby not interfere with the collapsing of said stroller.

11. (canceled)

~~11.~~ 12. (canceled)

~~12.~~ 13. (previously presented) The seat of claim 10 wherein said support means is a rigid bar member enclosed in said fabric at the underside of said seat at the juncture of said seating portion and said leg rest portion.

~~13-~~ 14. (previously presented) The seat of claim 10 wherein said seat is of unitary one piece flexible fabric and said support means is attached to said fabric at the juncture of said seating portion and said leg rest portion thereby to prevent inward and downward collapsing of said seat when said seat is occupied.

~~14.~~ 15 (currently amended) The seat of claim ~~13~~ 14 wherein said support means defines the juncture of said seating portion and said leg rest portion, is enclosed in said fabric at the underside of said seat at the juncture of said seating portion and said leg rest portion, and said seating portion is contoured to the anatomy of the occupant.
